Internet of things (IoT) is one of the most enticing and upcoming technologies. This Basic IoT course is for beginners. This Basic IoT course will facilitate you to understand the fundamentals of the Internet of things and applications of Internet of Things (IoT) and this course will provide you get started in the world of IoT. The course covers the fundamentals of the IoT and various sensors and components of the IoT world. School of IoT Development Board is a device that provides you with an opportunity to build professional IoT projects on your own. Be it turning your lights on and off or weather data logger or an automated garden, you can do all that with the School of IoT board. This intelligent device allows cloud data monitoring and has onboard data-log backup on SD card for data security and easy accessibility. The multichannel on board relay let's easy control over machineries. This high quality board is a one-for-all solution to add instant boost in any IoT demanding system.
